

Wireless Gateways

Spiderboss currently have over 80 direct connections to Wireless Network carriers. These connect in from our multiple node locations, making Spiderboss one of the best connected and most reliable Messaging Service Provider. This connectivity is high throughput SMPP, UCP and HTTP connections over IP. We are able to offer inbound and Two Way SMS in various countries around the world.

Worldwide Data Center Node Locations

Spiderboss is maintaining through its partners one of the world's largest messaging backbones. This will allow us to transport all message and media types around the world securely, quickly and cost effectively. This provides great benefits to end users of our systems, as with our revolutionary global messaging roaming technology they are able to collect messages locally from any node point around the world. Our Node network is currently rolled out to world-wide locations below.

- Singapore
- Canada
- Malaysia, TIME
- Germany
- China
- United Kingdom
- United States
- Malaysia, Jaring

Secure and Robust Gateway

The Spiderboss SMS Gateway is intended for mission critical text messaging solutions. It is designed from ground up to be robust and secure. Several customers have chosen the Spiderboss SMS Gateway to be assured their data is not compromised and stay within given domains.

The SMS gateway is running on servers with full redundancy; everything is doubled from hard drives to power feeding and using separate internet lines for minimizing downtime during planned service and maintenance or an eventual accident. The software is designed and developed using industry's best practice technologies regarding security and stability. The software is modularized and fully object oriented where each function runs in a sandbox. The SMS Gateway is running a firewall solution with intrusion detection. The environment is set up and configured in a fashion to be completely virus free. All systems are monitored 24 hours per day, 7 days a week. Once the data enters our system, it is forwarded to the network carriers. This means the data is virtually impossible to tamper with. For legal reasons, data is logged internally and stored in encrypted form.

In Case of Accident

We understand how important the data is to you and the importance of keeping all systems fully operational. Spiderboss is dedicated to provide the most reliable and secure solution as possible. No matter how high the security is, or how redundant and powerful the hardware is, an error or emergency can occur since nothing is 100 % failsafe. If a state of emergency occurs technicians will be able to help you with your inquiries. We work closely with you to resolve any kind of unwanted incidents, no matter how small. Contact our representatives in your country or our international customer support centre. E-mail: support@spiderboss.com Telephone: +46-8-525 09 474.
